

GraphQL Cheatsheet:

Client:

Einfache Query

```
query getProducers {  
  producers(name: "Peter") {  
    id  
    username  
    products(name: "Apfel") {  
      id  
      name  
    }  
  }  
}
```

Mutation mit Objekt als Input (und einem Enum-Wert):

```
mutation createProduct {  
  createProduct(  
    producerId: "d467f50a"  
    productInput: {  
      name: "Banane"  
      unit: KILOGRAM  
      price_per_unit: 2.50  
    }  
  ) {  
    id  
    name  
  }  
}
```

Variablen Definition:

```
{  
  "minimum_rating": 3  
}
```

Variablen Gebrauch:
<pre> query getProducers(\$minimum_rating: Float!) { producers(rating: \$minimum_rating) { id } } </pre>
Fragment Definition:
<pre> fragment UserFragment on User { id username email } </pre>
Fragment Gebrauch:
<pre> query getUsers { users { ...UserFragment } } </pre>
Inline-Fragment Gebrauch:
<pre> transfer_accounts { ... on Paypal { email } ... on Bank { account_number bank_code bank_name } } </pre>

Server:

Object-Type Definition:
<pre>type User { id: ID! username: String! email: String! }</pre>
Query-Type Definition:
<pre>type Query { users : [User!] user(id: ID!) : User }</pre>
Input-Type Definition:
<pre>input UserUpdateInput { name: String email: String }</pre>
Mutation-Type Definition (mit Input-Type):
<pre>type Mutation { updateUser(id: ID!, input: UserUpdateInput) : User }</pre>

Query / Mutation-Resolver:

```
const userDB = require("../database/user.db")

module.exports = {
  Query: {
    user: (parent, args, context, info) => {
      const { id } = args // const id = args.id
      return userDB.getUserById(id)
    }
  },
  Mutation: {
    ...
  }
}
```

Object- / Attribute-Resolver:

```
const companyDB = require("../database/company.db")

module.exports = {
  User: {
    company: (parent, args, context, info) => {
      const { companyId } = parent
      return companyDB.getCompanyById(companyId)
    }
  }
}
```

Enum-Type Definieren:

```
enum Day {  
    MONDAY  
    TUESDAY  
    WEDNESDAY  
    THURSDAY  
    FRIDAY  
    SATURDAY  
    SUNDAY  
}
```

Enum-Resolver:

```
module.exports = {  
  Day: {  
    MONDAY: "monday",  
    TUESDAY: "tuesday",  
    WEDNESDAY: "wednesday",  
    THURSDAY: "thursday",  
    FRIDAY: "friday",  
    SATURDAY: "saturday",  
    SUNDAY: "sunday"  
  }  
}
```

Interface & Sub-Typen Definieren:

```
interface User {  
  id: ID!  
  username: String!  
  email: String!  
}
```

```
type Consumer implements User {  
  id: ID!  
  username: String!  
  email: String!  
  purchases: [Product!]  
}
```

```
type Producer implements User {  
  id: ID!  
  username: String!  
  email: String!  
  business_days: [Day!]!  
  company: Company  
  products: [Product!]  
}
```

Union-Type Definieren:

```
union TransferAccount = Paypal | Bank  
  
type Paypal {  
  email: String!  
}  
  
type Bank {  
  account_number: String!  
  bank_code: String!  
  bank_name: String!  
}
```

__resolveType Resolver:

```
module.exports = {  
  User: {  
    __resolveType: (user) => {  
      switch(user.type) {  
        case "producer": "Producer",  
        case "consumer": "Consumer",  
        default: throw Error("Could not identify")  
      }  
    }  
  },  
}
```
